Network Eagle Monitor is a powerful network service monitor. You can create categorized list of checks on a set and forget basis. Checks are run at regular intervals and activates predefined alerts on given condition. With the help of this monitoring program one can easy setup checks like: ping a server, monitor TCP port, check HTTP URL (with HTTP auth), test FTP link, check disk space usage, execute external command check, check databases via ODBC like MySQL etc, monitor MS SQL server via native interface. Advanced users can write your own script checks using JS and VBS or any other script provider like ActivePerl or Active Python installed on your system. Among alerts users can find playing sound, sending e-mail (icq, sms via mail gate), execute external program or user-written Java, VB script. Advanced log features are also included. Application has convenient and intuitive user interface. Plenty of handy wizards allow one to smartly configure many checks at once.
