Email   {value_email}

The Omnistar Drive document management software is a web based file manager that will allow you to setup a secure file storage repository. You will have the ability to create unlimited user accounts and give users custom permissions to various folders and files. Users permissions can also be customized to allow them to have viewing, editing, deletion or full rights to the files and folders that they upload. Our document management software is entirely web based and can be used as an alternative to an FTP program. The software can also be private labeled allowing webmasters to brand the product as their own and resell to their customers. Other features of the Omnistar Drive document management software include a built in java upload tool that will allow you to upload files of any size, an advanced document search feature and a document email feature allowing you to email document links to anyone.
