

Online Appointment Scheduling

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

"Schedule Organizer" is an online scheduling tool based on PHP and MySQL that can be used on any kind of company web sites for making reservations online. The script allows website visitors to browse a weekly or monthly calendar where they are able to make an appointment, reserve a hotel room, a restaurant table or anything else you want to be booked online. Appointment and customer data can be edited by the administrator or by the users themselves. The scripts allows to create an arbitrary number of appointment areas and also an arbitrary number of capacities per time slot. That means that multiple appointments are possible at the same time. In the admin area the administrator can create new user accounts and list existing users, can list upcoming and recent appointments and can reserve administrative appointments. Read further information and try several online demos on our website.
