Online Clinic Management System (OCMS) is a web application that allows you to manage your clinic. This application offers you insight on your clinic activity and keeps historical records of every single patient, all his visits and related prescriptions. The patients info you can store include tobacco usage, alcohol intake, surgical and obstetric history and genetic diseases. It is easy to use, and makes you become more organized and accordingly, more productive. OCMS was created using AppGini. So you can easily customize it to add/remove details or any extra functionality to fit your own requirements. OCMS is a responsive web-based application that you can access from your PC, tablet, mobile or any other device.
