Online Web Messaging System

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Use secure messaging to send and receive messages from a alternative web-based mail system. Using the secure messaging system no actual mail is transmitted through any 3rd party servers. Only an optional message notice is sent to the recipient, the user needs to visit the site in order to read the message. Normal SMTP mail can hit multiple servers and can possibly be read, stored, or changed anywhere within the process. Setup secure messaging on an SSL enabled website to enhance the privacy even more.
