Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Opera Right Pronto is a GPL Perl script to import an Opera 6.x email contact list into Pronto. This is eminently useful for Windows users who are just moving into Linux and need their contacts list imported with ease. Just place ORP and your Opera contacts file in the same directory as Pronto(usually /home/user/.pronto) and run the script! A README and the GPL text files are included.
