Oracletool is an interactive, web based application that runs as a CGI script using your web server. The advantage of Oracletool over tools such as Oracle Enterprise Manager is that nothing needs to be installed on the client side machine. All you need to use Oracletool, once installed, is a web browser. There is nothing that needs to be created or altered in your databases to use Oracletool either. All Oracletool expects upon connection is "SELECT ANY TABLE" privileges. It requires the DBI and DBD::Oracle modules.
