

# Order Tags

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

The native Magento Orders page is not very functional and it doesn't give you wide possibilities to filter orders in the way you need. The Order Tags extension allows grouping orders by their attributes through adding tags to each order. Our module adds a special column at the Orders page which allows defining flags for orders. But you can always automate the process of tags assignment by specifying certain conditions – order obtains N status, order subtotal equals X, grand total is more than Y, shipping\billing country is B, etc.
