

Password Prompt

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

If a visitor wants to go a password protected page, they must first enter the correct password on the page with this script. This script will just take you to [password you enter].html. This program works as long as JavaScript is enabled and you have an index.html file in your directory. The password is the protected filename without the .html ending.
