Password Protector Script

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This script is a very simple form of web site password protection. Instead of directing people to your main html file, you use this script as a filter to verify users for the password to gain access. If the password is accepted, then the script automatically takes the browser to the "protected" web page.
