Mobile Number	{value_mobile_number}
Email	{value_email}

PasswordSafe is a free PHP script that will allow you to manage all of your account passwords and other sensitive data. You will only need to remember one master password, and that in turn will give you access to all of the data that you store. Your data will be securely encrypted using industry standard AES 256 encryption, which ensures that only you will be able to access your data. This is the same type of encryption that the US government has selected for use when encrypting classified data! Installed on a webserver, you will be able to access your encrypted data from any modern browser, anywhere in the world.
