

PayPal Payment

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The PayPal Payment class can be used as a Flex component using MXML or in a pure ActionScript 3.0 project. It allows you to specify the recipient PayPal account, item description, price and currency and redirect the user to a payment page. Optionally you can set up the URL to redirect the user to after a successful payment. Ideal and very easy to use for any Flash or Flex based e-commerce applications. Examples for use in an ActionScript and Flex project are provided, check readme.txt to get started.
