<b>Email</b>	{value_email}

This tool automates the creation of online photo galleries for PHP-Nuke sites. It generates PHP and HTML pages that honor the look and feel of Nuke themes. It also supports e-commerce enabled galleries, with payments being collected via PayPal. It supports all the major image file formats and automatically creates thumbnails and resizes the images to fit the pages. The tool uses customisable templates for the page generation, so the only limit is your imagination! It will include details of each image from its database, cutting out much of the typing normally associated with creating web galleries. Note: This is a complete image management system with PHP-Nuke features.
