Philweb Guestbook

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

A simple database-driven guestbook application. Allows users to post comments about stuff, which is immediately displayed on the site. The code cuts out HTML, inserts line breaks, and chops words longer than 30 characters (to stop deliberate attempts at messing up the layout). Displays a set amount of messages at a time, and allows users to view previously posted messages. Includes an admin backend for deletion of selected posts.
