

PHP and Forms

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

You probably have a CMS or at least a blog script running on your website and to add articles, among other things, you fill out a form. If you've ever wondered how that translated over to a blog being added to a database and how it's verified, then you will want to read this tutorial. I'll go over the simple passing of data from form to adding it to the database and the different functions and variables that can be used.
