

# PHP Capture Command Line Input From User

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Reading from the command line can be useful for creating php scripts that run from the command line. It can be used to capture the user's decisions such as specifying the install location or setting up config preferences for a new website.
