

php Click Counter

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Now with a smooth jQuery Accordion navigation, our php Click Counter can store and display clicks on any link throughout your website. In addition, you can also mask your links with the generated code. PHP Click Counter uses a flat-file system so access to a database or similar database is NOT a requirement. The administrative console will allow you to view your link statistics, remove and reset your added links, show and copy your generated Click Counter URL as well as the ability to download and restore your flat-file db files. This application also uses an animated, collapsible navigation system to attractively toggle between tasks. Take a look at the demo for more!
