

# php easy :: whois lookup script

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Whois Lookup Script is intended to lookup for domain registrant data for all top-level domains (both generic and country-code types are supported, 158 TLDs in total), and also for IP whois lookups. Update: now provides only unique whois results and cuts off comments when querying different whois servers for IP data
