PHP Form Emailer

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Sending information as an Email from big and complex forms is always problem. Using this Function you can send the data filled in the Form to any email or save as a text file. Form data is arranged according to the Template file and then emailed. You can also save the text file according to the Template. Information can be rearranged at any time by changing Template file.
