The php-js-webedit editor is a tool for editing and building HTML pages (relatively complex) from a browser. It allows you to edit the HTML code in a textarea field, and includes a variety of JavaScript functions to assist you for creating links, tables, lists, inserting images, etc. Once you are finished you can easily submit the content to a CGI and store it in a Database. You can use the application as a module itself or embedded in another application (the application can be configured to adapt it to your applications). You can also choose the language: emglish, spanish and cathalan. The php-js-webedit editor is written in HTML and Javascript, and it uses PHP as a server-side language.
