Email	{value_email}

PHP Layers Menu is a hierarchical dynamic menu system to rapidly choose among the items. It works with both PHP3 and PHP4. It achieves a compact view and a reasonably small file size for the page with a very large number of entries. Its behaviour is completely analogous to the Gnome, KDE and MS Windows main menus. You can use as many levels as you need, and the menu is dynamically generated from the menu structure file. It supports Mozilla, Netscape 4.x and 6.x, Konqueror, Opera 5, and Internet Explorer 4, 5, 5.5.
