

# php Site Recommender

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Now with lightWindow+, this php Web Site Recommendation script allows your visitors to enter their contact information and recommend your site to as many recipients as you specify (only one required). The default messages are easily modified and the look and feel is customizable as well via the css stylesheet. You can choose to be notified when your site has been recommended and the notifications will show the recipient(s) as well as the message. Email addresses are hidden so they will not be harvested by spammers. This script also contains error checking and validation and does not require database access. Most of all, the script is very easy to install! Visit our site for two demos and our new eDelivery system!
