

PHP Spam Poison (phpwpoison)

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The PHP Spam Poison is a page generator that simulates long lists of fake email addresses and links to more fake generated pages. So, when spam-robots (spam spiders) try to harvest email addresses from your website, they get hundreds or thousands of fake email addresses, effectively poisoning their databases with useless data. This spam poisoner was inspired by the WPoison software.
