

PHP Text to Image Converter

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This script is a means to convert a string of text into an image (PNG files). This has some simple uses such as displaying text such as email address that cannot be programmatically found. This can help to reduce the possibility of your email address being picked up by web crawlers and used for junk mail. You can modify the font color, font size, rotation, background color and whether lines go through the text.
