PHP True Type

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Never be shackled down by being forced to use standard web suitable fonts again. This light weight script allows you to display any text in any true type font on your website by converting the text to an image on the fly. PHP True type supports transparent, or coloured backgrounds, font colours, font sizes, maximum page width and text alignment. The script will also automatically insert line breaks if the text exceeds the maximum width specified. PHP True Type is the ideal solution for displaying barcodes online, and is supplied with a set of free barcode fonts.
