

PHP Users online counter

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The script identifies users by their IP address which is stored in the database, using a one way hash, for a set time out. Once this time out is exceeded the entry is removed and the user no longer counted as "online". A count of the rows in the database at any one time reveals the amount of users online.
