

# PHP Whois script

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

With this PHP class is it possible to check the whois information for domain names. If the result for a query is negative that a standard message is given. Special features: String validation for the name part, dynamic select menu for the defined tld's, domain check or full domain query, multiple domain check. New! .eu and .us type domain names are supported now.
