phpMySite

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Looking to create a personal site to display articles and pictures? phpMySite will help you do just that! It's as easy as uploading the script, and setting up a database. We have a support forum if you need help with anything. phpMySite contains an Article section where you can add your own stories, and organized them in categories. The newest articles will always appear first on your homepage. There is also an XML button that allows you to syndicate your content for sharing with others. phpMySite also acts as a photo album. You can quickly and easily upload your photos to share with friends and family. Thumbnail images are automatically created, and the newest pictures (you decide how many) appear on your homepage. The Contact Form allows you to receive messages from others without sharing your email address online. This helps to reduce spam. It uses the "captcha" technology to prevet bots from spamming the form as well.
