

phpMySQLAutoBackup - automate your MySQL backup using php

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Now includes detailed reporting - phpMySQLAutoBackup the simple way to backup MySQL databases - automates the backup of your MySQL databases. Exports your database (data and structures), compresses it into gzip format and emails it to you. Schedule it to run every day/week by adding it to a cron job, or use phpJobScheduler. New features include the ability to select separate tables for backup, and limit the backup to start and stop at pre-set table row numbers, this will now allow a section of a large table (with millions of records) to be selected for backup. Features: * option to ftp backup file to remote server * email zipped database to your specified address * option to save to backup folder * backup limited to once per hour (easily changed) prevents malicious attempts at bringing down your server * specify specific tables to include or exclude, or backup the whole database * set ranges to backup - from start row number to last specified row number
