Mobile Number	{value_mobile_number}
Email	{value_email}

This is my FormMail replacement. Like every other replacement this one mails every posted field of a submitted form. When you post a form to it, it should mail it all to you ;) I don't have an example online cause I don't want to be spamed ;) It should run on any server with PHP4 or higher installed on it! Download, untar, read the README.txt, edit the form.html, upload and ponit your browser tho the form.html and you're ready for business! If every thing was that easy. Extra in this version is the variable autoreply function.
