

PHPSitemap

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

PHPSitemap indexes HTML/PDF content, features multiple display options (ascending/descending by title/filename), and allows the user to change these variables on a per-directory basis using simple configuration files. Customizing the output is accomplished with plug-ins. Submit your own to the author for inclusion in future releases.
