PKLite SQL Client is an Open Source Java program can connect to any JDBC compliant database. It has basic query and update functionality and some simple database information capabilities. The goal of this project was to create a lightweight SQL client (~ 1 MB) that was portable, easy to install and be vender independent. There are still some issues to be worked out so that is can be completely database vender independent but with this new build it is able to connect to any database that has a JDBC driver and run on any OS that has a Java VM.
