

# Portal Servlet

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

This is a Java servlet for building portals. You can use this servlet for developing your own portal as well as for portal running. Portal here is a set of individual portlets. Each portlet has got own attributes, including URL source. So any portal looks like a grid of portlets. You can select grid, size for the each cell (portlet) and of course a source (url) for the each portlet.
