Portalsuite allows you to build websites or mini portals with a complete Content Management System. Alternatively you could use the Portalsuite to migrate existing websites step by step. The Portalsuite 2001 Light consists of three applications: Content Manager, Admin Center, Reseller Center. The Content Manager allows you to administer articles, pictures, video and sounds easily with your web browser. No trainings or programming skills are needed. This real time application enables anybody to put the content on his/her website or portal, and all changes are updated immediately. In the Admin Center you define structural, layout and design parameters, etc. The Reseller Center is used to administer several portals. With special portal templates you can create complete portals based on style sheets, automatically.
