

Powerful email address validation

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Validating Email addresses is not limited to finding "@" and "." signs in the address! There are higher concepts, but few are aware of them. This article shows you a simple way to check if the Email address provided by a user is "real" to a higher extent than current famous validation codes do.
