ppSD2 is PHP/MySQL-based membership software that is installed directly on your website (click here for requirements) and runs online from any web browser, making it accessible from anywhere with an internet connection. The program allows you to establish member types, secure and deliver content, sell memberships with recurring dues, and manage memberships, all for as low as \$13/month with no contracts and no hidden fees. Beyond the standard feature-set, the program employs a number of tools to maintain a flexible and highly customizable framework, including brandable templates, custom hooks, and preset integration with 3rd party modules like Wordpress, Drupal, and phpBB. This allows ppSD2 to adapt to your specific requirements without forcing you to alter your business's existing framework.
