Profi Search Form

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

ProfiSearchForm enables you to easily create a unique search filter for your WordPress application. You can use your Custom Fields and Taxonomies to create selectboxes, check- and radioboxes, rangesliders, inputfields. You can create a fulltext search which actually highlights matching phrases and with it is possible to create outstanding search result listings with all the information, your visitor needs. What is a search for products of a specific price range without showing the price, right? You can include the search as widget or shortcode and it is completly AJAX driven. You can add conditional fields. Lets say, you can search for hotels and restaurants, if your visitor selects restaurants, you want to show him additional possibilites like Chinese, French etc. With the conditional fields, you have the ability to do so. You can also add a Google Map. Your visitor can drag and drop a rectangle and will only get blogposts within the specific Latitude and Longitude!
