Python Programming on Win32 is the first book to demonstrate how to use it as a serious Windows development and administration tool. Unlike scripting on Unix, Windows scripting involves integrating a number of components, such as COM or the various mail and database APIs, with the Win32 programming interface. While experienced Windows C++ programmers can find their way through the various objects, most people need some guidance, and this book is it. It addresses all the basic technologies for common integration tasks on Windows, explaining both the Windows issues and the Python code you need to glue things together. Topics covered: Python programming quick-start, Windows Python basics, Python support for COM/DCOM, the Pythonwin editor, Office 2000 scripting, Windows NT administration and system programming, Python MFC programming, and Active Scripting.
