QandA is a compact FAQ or news display applet. Each item consists of a heading which, when clicked, displays its associated text below, closing any open item at the same time. Headings and text auto-wrap, and the text can contain HTML links, and other HTML tags such as BR, P, FONT COLOR and B. Separate styles and colors can be defined for headings and text, and an optional selector highlights the item when focused. QandA supports MP3 sound effects, and can be transparent in compatible browsers.
