Querying an Access database in ASP

Address   {value_address}
Contact Person   {value_contact_person}
Mobile Number   {value_mobile_number}
Email   {value_email}

Active Server Pages allow us an easy means of querying and updating a database from a webpage. This article describes the basics of using this technique in a nutshell. The examples given here utilize a Microsoft Access database, but the principles elucidated apply equally well to ASP integration with other databaes.
