

Random URLs

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Send the user to a randomly-selected URL. The 'onClick' handler for the button calls a simple random selection function that is defined in the header of this script. The function sets the HREF of the object to the value returned by the script, and then sends the user off to the appropriate URL.
