

# RapidSpell Web Java

|                       |                        |
|-----------------------|------------------------|
| <b>Address</b>        | {value_address}        |
| <b>Contact Person</b> | {value_contact_person} |
| <b>Mobile Number</b>  | {value_mobile_number}  |
| <b>Email</b>          | {value_email}          |

Add spell checker functionality and value into Web applications with a couple of lines of JSP code. RapidSpell Web provides JSP developers and designers with a cross browser (and multi client platform) web Tag that requires no client installation, no special security settings and as much programmatic flexibility as you want. RapidSpell Web includes 2 interfaces, an inline highlighter and a fast (no post back) dialog interface. RapidSpell Web uses combined and separate customizable 140,000 word U.S. & U.K. dictionaries (and user dictionary) and a powerful suggestion engine. Australian and Canadian dictionaries are available freely on request. Non English dictionaries are also available. Improvements in v5.0 - Spell check options dialog added. - Added support for the context menu key on the keyboard. - jQuery UI based dialog mode added. - Modal mode improvement to use jQuery UI dialog. - Smaller bug fixes
