## **RChart Php Edition**

Address Contact Person Mobile Number Email {value\_address}
{value\_contact\_person}
{value\_mobile\_number}
{value\_email}

Set of Php Classes for creating charts and graphs. It supports more than 18 types (linechart, piechart, barchart, radarchart, curves, gauges, 3D charts, Candlestick, areacharts ....) and combinations of them. It supports also database access, automatic scales (dates and logarithmic), any number of charts, target zones, notes and interactive features using image maps (tips and links). You can create charts with minimum programming. Trial version is now available.
