Mobile Number	{value_mobile_number}
Email	{value_email}

This is an ASP/Access-based shopping cart system. There are two different shopping cart versions available. With the first you can process your orders manually or connect it to a credit card vendor for online processing (such as authorize.net). The second version uses paypal for those who would like to rely on a fee per transaction with no monthly payments. Both versions offer easy to use administration and storefront. Also new footer and header to the entire shopping cart can be applied with ease, so that new look or replication is a plus here. It offers as much technical support as you will need to get you up and running. Online demo available on its website.
