

Remote File Explorer

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This powerful tool allows you to remotely manage files on a web server via Internet Explorer. Based on the 'Windows Explorer' look and feel, this program has a very simple interface that almost anyone can use. Access and permissions can be granted on a user or group basis, and can be tightly integrated with Windows Authentication. With expandability in mind, this program was designed to accept plugins that can greatly enhance the programs capabilities. It can even be used to monitor and manage the web server itself.
