

Remote Menu Example I

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This is a neat JavaScript that allows you to add a popup remote control menu on your page for easy site navigation. In the remote menu, when a user moves his/her cursor over a link, it displays the description of the link, and when clicked it sends the user to the link in the current page.
