With PHPJabbers' Restaurant Menu Maker you can easily integrate a fancy online menu into your gastronomy website - no matter how it was built. Script admins can select the theme that suits their website branding best among 10 color variations. The online menu script front-end is responsive and loads on various mobile devices regardless of the screen size. Furthermore, you can translate your online menu into multiple languages. Create multiple main and subcategories for your dishes and assign countless products to them. Set different portion sizes, define prices for each type. Make your online menu unique by adding delicious-looking images and tasty descriptions. Launch various special offers and combo meals to attract more clients. Select the meals that you want to include into the promo menu and the number of people it should apply to. Enable/disable the offer when necessary, without deleting it from the back-end system.
