

RISE AJAX Code Generator

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The RISE AJAX code generator renders JavaScript source code, that uses jQuery, for accessing your JSON enabled web services in your Rich Internet Applications or AJAX applications. The source code from the code generator is compliant with any JSON enabled web service, .NET as well as PHP, generated from the same RISE model, i.e. it works with the output from the RISE C# for ODBC, RISE PHP for MySQL and RISE PHP for PostgreSQL code generators. When creating an AJAX application using RISE you follow these steps. 1. Model your solution in the RISE Editor. 2. Generate your database using a database code generator. 3. Generate your web service application layer using an application code generator. 4. Use the AJAX code generator to generate JavaScript functions to access your application layer from your RIA application / AJAX application.
