

Roman Numeral Counter

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The Roman Numeral Counter keeps track of how many people have viewed a given web page. This one counts in Roman numerals instead of the typical Arabic numbers. Because both Perl and the Unix operating system perform all native computations in this mathematical system, the Roman numeral counter executes eighty to ninety percent faster than others.
