RTF-Edit is a full featured cross browser WYSIWYG editor. Unlike many editors, RTF-Edit has been developed to work with popular browsers such as Internet Explorer Mozilla/Firefox (including Linux) and Opera. Under Opera RTF-Edit gracefully degrades to a textarea so you can be assured that using RTF-Edit within your applications will cause no problems, even if WYSIWYG editing is not supported. With full control over what is placed within the toolbar of RTF-Edit means that you can deliver just the right amount of editing functionality to your users.
